An overhead camshaft engine is a piston engine where the camshaft is located in the cylinder head above the combustion chamber. This contrasts with earlier overhead valve engines, where the camshaft is located below the combustion chamber in the engine block. Single overhead camshaft engines have one camshaft per bank of cylinders. Dual Over Head Camshaft engines have two camshafts per bank. The first production car to use an DOHC engine was built in 1910. Use of DOHC engines slowly increased fr
