A star is an astronomical object consisting of a luminous spheroid of plasma held together by its own gravity.The nearest star to Earth is the Sun.Many other stars are visible to the naked eye at night, but due to their immense distance from Earth they appear as fixed points of light in the sky. The most prominent stars are grouped into constellations and asterisms, and many of the brightest ...

### Star - Wikipedia

Climate is the long-term average of weather, typically averaged over a period of 30 years. More rigorously, it is the mean and variability of meteorological variables over a time spanning from months to millions of years. Some of the meteorological variables that are commonly measured are temperature, humidity, atmospheric pressure, wind, and precipitation.

### Climate - Wikipedia

Deși poate fi aplicat și altor membri ai genului Homo, în uzul comun, cuvântul „om” se referă în general la singura specie existentă —Homo sapiens.Definiția lui H. sapiens în sine este dezbătută. Unii paleoantropologi includ fosile pe care alții le-au alocat diferitelor specii, în timp ce majoritatea atribue doar fosile care se aliniază anatomic cu specia așa cum există ...
