Chapter 3 Motion in Two and Three Dimensions 3.1 The Important Stuff 3.1.1 Position In three dimensions, the location of a particle is specified by its location vector, r : $r = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$ (3.1) If during a time interval Δt the position vector of the particle changes from r_1 to r_2 , the displacement Δr for that time interval is $\Delta r = r_2 - r_1$...
