Though there are many words to describe the moment that you first hear your baby's heartbeat, most people use words like galloping to describe how the heart rate sounds. While the heart rate in pregnancy is faster than an adult's heart rate, the truth is that a normal fetal heart rate changes during the stages of pregnancy and throughout the day.

Normal Fetal Heart Rate During Pregnancy

What About the Heartbeat? There are also accounts of health care providers detecting a second heartbeat before they actually see the second fetus on an ultrasound. Not only are these incidents extremely rare, but they do not always mean that there is a hidden twin. It may simply warrant another look via ultrasound.

Can a Hidden Twin Be Detected by Ultrasound Imaging?

It's understandable that you might wonder when to worry about heart palpitations given that, well, heart palpitations is a catchall term for feeling like your heart is acting weird. Heart ...

When to Worry About Heart Palpitations | SELF

Heartbeat protocol The custom-engineered Heartbeat protocol of DGLegacy verifies that you are OK and detects whether anything unforeseen has happened to you. It is a safe procedure which also aims to eliminate the possibility of false detections of unforeseen events at any cost.

The chances of women having a miscarriage in their childbearing years ranges from as low as 10 percent to as high as 25 percent. For most healthy women, it averages to around a 15 to 20 percent chance. 1. Older women have an increased chance of having a miscarriage. 2. Women under age 35 have a 15 percent chance of having a miscarriage. 3.

10 Unbelievable Missed Miscarriage Statistics - HRF

At your prenatal appointment, the midwife or doctor will want to check for a heartbeat, starting at around 10 to 12 weeks. Sometimes a second heartbeat can be heard. However, sometimes you can be carrying twins and still not be able to hear two heartbeats with the doppler (even when you're looking for two!).
